1 INTRODUCTION

This document describes the activities that JIRAM performed during the activity period JM0161 (PJ16), with particular attention to the comparison with the expected data and that achieved, keeping track of the configuration of the instrument with commanding file (SASF).

3 ACTIVITY DESCRIPTION

During the PJ16 pass, JIRAM had partial coverage of the North Pole (see fig. 1 and fig.2) and observation to limb. Many observations are focused on the satellite footprints. Moreover, observations of the Jupiter's moons IO and Ganymede have also been done (not reported in the figures). Details about imager/spectrometer coupling and more in general about the instrument and its performance can be found in Adriani et al. (2017), Noschese et al. (2019).

Note that there is a spectral observation corresponding to each observation taken with the imager. Due to an uncertainty in the actual pointing of JIRAM frame (which is affected by the position of the despinning mirror at the time of the observation), JIRAM team founded that the precision on the reconstruction of the geometry of both IMG and SPE pixels should be revised to a value of no less than 0.1 degrees. We want to underline that this issue was discovered only starting from the JM0131, when we started to do systematical limb observations near the Perijove (PJ) and we could compare the calculated planet limb, using the reconstructed kernels, with respect to the image we collected by our instrument.

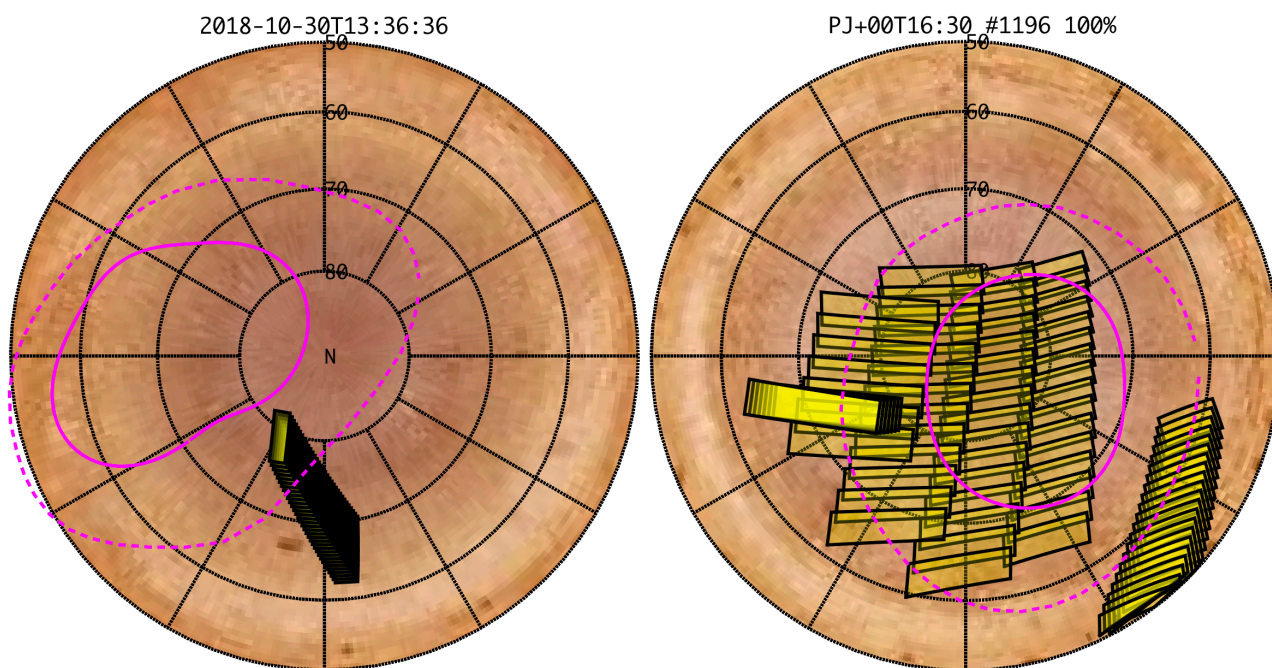

Figure 1: Simulation with JSPT (JIRAM Software Planning Tool), coverage of the North Pole with filter M . The overlapped yellow strips represent the predicted FOVs.

Figure 2: Simulation with JSPT. Coverage of the North Pole with filter L.

4 RADIATIONS ACQUISITION

Radiation sequences were collected in locations of low particle flux in order to update the mapping of good pixel locations to be used in subsequent radiation data processing. Radiation sequences targeting observations of the radiation environment were performed in the middle magnetosphere.

5 SCIENTIFIC GOALS

Below is a table that describes for each science block in the commanding file the relative operational mode and the scientific objectives. The files relating to the various science blocks are shown in the file “JIR_STATUS_EDR_2018202T041935_V01.CSV” in the INDEX directory.
